inspector 4.9.1

SCA & FI software bug fix release

April 2016

Contents

Fixes in 4.9.1

Microross USB support

Several users ran into issues with the Micropross USB support. To remedy this 4.9.1 provides several improvements:

1. **Drivers**: Page 95 of the Inspector manual clarifies the steps for installing the Micropross USB drivers. Several instructions were provided to us by Micropross since they relate to some known issues with the MP500.

2. **Libraries**: The Inspector software now includes Micropross libraries easing the installation process for USB.

3. **Error handling**: The error handling with USB communication has been improved so it is clear to the user when the USB connection fails.

Fixes in 4.9.1

VC Glitcher smart card communication

The issues with VC Glitcher smart card communication introduced by 4.9 have been resolved.

The communication data in the perturbation logs does not get corrupted anymore.

Upgrade procedure

Inspector 4.9.1 installation

Where

- Customers with a Support Contract receive a download link

Installation guidance

- The Inspector software can be installed on the same PC workstation next to your previous version. You can still revert back to the previous version if you want to.
- API is backwards compatible with Inspector 4.7

My own modules & traces

- New Inspector software points by default to the same user module folder as previous versions.
- Your own modules and traces from Inspector 4.7 are compatible with latest Inspector software release.
- In case you have trouble porting an older module to this Inspector version, please contact our support portal for assistance.

SDK and firmware updates

- n/a
